

Voyageur

CSC207 Project – Phase 2 UML Diagrams

Yasmin Arson, Stew Esho, Heddy Gong, George Huang

These are the UML diagrams for our Phase 2 CSC207 Project, titled Voyageur.

The first page will be the UML for our **Support** package, which acts as the Model in MVC. Most phase 1 code as well as any new features added can be found in this package.

The second page will be the UML for our **Control** package, which acts as the Controller in MVC. It also contains code for the View, but since most of that code is written using JavaFX's FXML and CSS, it does not appear in the UML diagram. The code that is shown allows users to use the View to interact with the Model.

The third and fourth diagrams once more represent the Support and Control packages, but this time all is shown are the class names, inheritance arrows, and *dependency arrows*. This way we can see how all the classes in each package interact with each other.
